*(Homework Assignment 11: Solutions)*

**Question 1.**

By examining all possible paths from the Start to the Finish node, the longest path is given by *START-A-C-G-K-M-FINISH* or *START-A-B-F-K-M-FINISH*, each of which yields a total length of 44. All activities along these two paths are critical.

**Question 2.**

The forward and backward passes yield the ES and LC column values in the table above, from which we extract the total float for each activity and identify the critical ones as those that have zero total float (B,F,K,M). The minimum project duration is 38 days.

### Question 3.

The network for this is shown below:
