## **Overall process**: make a copy of an existing Anaconda shortcut, then modify it as an IDLE shortcut.

Step 1. Find your Anaconda shortcuts in START menu. Right click "Anaconda Navigator", open up the folder where they are stored.

≡	Recently added Productivity				
	🔲 Zoom		🥶 🐖 🛪	Waspaak	
	#		۰ 🔹 📥	Yahoo	
	3D Viewer	Office	S	Mail 📼

	Anaconda Navigator (Anaconda a		Partly Sunny		
	Anaconda Powershell Prompt	Pin to Start			_
	Anaconda Prompt (Anaconda	More	>	-⇔ Pin to taskbar	
6		Uninstall		G Run as administ	trator
134				D Open file locatio	on
	Jupyter Notebook (ELI DataMining)				
	Reset Spyder Settings (Anaconda3)	9			
	Spyder (Anaconda3)	Google Chrome	Firefox		
ŝ	В				

Step 2. Make a copy of your "Anaconda Navigator" shortcut. Then, rename it "IDLE shell (Anaconda3)".

Step 3. In the "Property" of the copy shortcut, change three things:

- a. Target: Replace "anaconda-navigator-script.py" with "idle-script.py"
- b. Start-in: Change to your script folder, say "C:\Users\narae\Documents\ling1330".
- c. Click "**Change Icon**" button. Replace "Menu\anaconda-navigator.ico" with "Lib\idlelib\Icons\idle.ico"

Step 4. All done! You now have a new shortcut that launches Anaconda's IDLE shell.
