Large Eddy Simulation Reduced Order Modeling

Traian Iliescu *

Abstract  This talk develops a large eddy simulation reduced order model (LES-ROM) framework for the numerical simulation of convection-dominated flows. This new LES-ROM framework centers around two main ideas: (1) the proper orthogonal decomposition (POD) is used to define a low-dimensional ROM basis, and (2) an explicit spatial filter is used to define the large ROM structures. The LES-ROM framework is illustrated in the numerical simulation of a three-dimensional flow past a circular cylinder at a Reynolds number Re=1000.
